Vasily Tarasov wrote on Mon, 26 February 2007 05:41 Hello,

It will be perfect, you'll post here:

1) full .config file you used, while compiling OpenVZ kernel in use

see Attachment.

Quote:

2) Your backup-script. Having it in hand we will be able to produce the same stress test locally and probably reproduce the crash.

it is only:

```
/usr/sbin/faubackup --one-file-system 10.0.0.136:/data1
```

see <http://faubackup.sourceforge.net/>

Quote:

It will be great, if you can set up a remote console and press magic keys while next crash (http://wiki.openvz.org/Remote_console_setup http://wiki.openvz.org/Magic_SysRq_Key)

Ok, I start Remote_console_setup...

Quote:

Also you can compile OpenVZ kernel with official configs from openvz.org and check, is the problem reproducible with such kernels.

I download kernel-smp-2.6.18-ovz028test015.1.i686.rpm and I try to using this kernel after the next reboot...

Thanks for your help

Grisu
