Hi. Are all features in 2.6.26-openvz kernel from git functional? If is it a good time to start testing it in semi prod environment?

Conntracks are still broken
No cpulimits since 2.6.24 still

Other stuff seem to work Start testing

I know about conntracks, but don't know what does it mean exactly for openvz hw node and VEs.

Exactly the same way as on usual node without OpenVZ.
Most probably xemul meant that you won't be able to use most of iptables rules inside a Container.

Thank you for info. Are there any plans for making conntracks work in 2.6.26 in the near future?

Does a release of 2.6.26-bulgakov means that all missing features are working?
