Running into a problem and not sure what I'm doing wring. Created a software raid 10 array.
Everything seems to be normal except that if you take the array down and run e2fsck on it there
are always errors, mostly all little stuff and it recovers without losing any data.

I just upgraded to the latest 2.6.18 kernel and that didn't fix it.

The problem will happen most all the time. I can format the partition, put the data on it then shut it
down and run 2efsck and there will be some errors to fix.

In the past after running for weeks the raid array will unexpectedly go inti read only mode due to
the errors. After running e2fsck it will run normal again.

I've never used raid 10 before (stripes on top of 2 mirrors) so I don't have anything to compare this
with. I'm just wondering if I'm doing something wrong. I am using ACL and dir_index attributes.

If I run e2fsck twice in a row it comes up with no errors he second time. However if I mount the
/dev/md2 device and then immediately umount it and run e2fsck again I get some errors.

e2fsck 1.39 (29-May-2006)
Pass 1: Checking inodes, blocks, and sizes
Inode 17172774, i_blocks is 8304, should be 19272. Fix? yes

Inode 37126149, i_blocks is 872, should be 2192. Fix? yes

Pass 2: Checking directory structure
Pass 3: Checking directory connectivity
Pass 4: Checking reference counts
Pass 5: Checking group summary information
Block bitmap differences: +(39500534--39501904) +(74267806--74267970)
Fix? yes

Free blocks count wrong for group #1205 (1371, counted=0).
Fix? yes

Free blocks count wrong for group #2266 (17206, counted=17041).
Fix? yes

Free blocks count wrong (218321825, counted=218320289).
Fix? yes
