Subject: Ram and second hdd

I have been looking at openvz and it sounds really interesting.
I have been reading some manuals and doing a bit of searching but I can't find answers to the following questions...
When adding hdd's, how should they be mounted? Under /vz2 /vz3 or something?
And about big ram 4gb+
Would I have to be running a 64bit host and 64bit templates? Or is there some modifications so I could use 32bit host and templates?

Thanks.

What do you want to do with that hdd?

You can use for example PAE kernels.
http://download.openvz.org/kernel/branches/rhel5-2.6.18/curr ent/

http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf

I am thinking for later, if I fill my server with vps's if I could add a second hdd and add vps's to it?

Bump!
Can anyone help me with the second hdd issue?

Hi,

sorry for delay.

yes, of course.
Just mount it somewhere, for example to /vz/private1.
And then use the option "--private /vz/private1" with "vzctl create" command

Great!
I love how simple openvz is!
