Subject: 2 separate IP address classes

Hi,

I have a HN that has a valid IP address say a.b.c.d
I have assign an internal IP address like 192.168.1.1 to it as well, so that I can have VEs with internal IP addresses (not visible on internet)
I created a VE (#100) and assigned 2 IP addresses to it :
a.b.c.e & 192.168.1.2
At this point everything is working fine

Then I created another VE (#200) with only one internal IP address like 192.168.1.3

I used the VE #100 to connect to VE #200 and it worked without a problem. But when I'm inside VE #200, it doesn't have any access to internet. I can't do anything on it. I tried adding 192.168.1.1 as the default gateway, but it didn't help.

Can you please let me know what is the problem?
Thanks
