Thanks,

I will release it soon for downloading. Also, I want to make some test cases so looking specifically for people who are running x86_64 linux. I know it works fine in 32 bit.

Also, I will need test cases for the following OS installed on the hardware node once released:

Fedora (version)
CentOS 4 (works)
FreeBSD
RHEL 3
RHEL 4
CentOS 4 x86_64
RHEL 4 x86_64
RHEL 3 x86_64

Any other main hardware node OS? Anyhow, if people running these could update the post that was once it is released I can get some status back a week or so later for you to test.
