How do you make this template show up to vzpkgls? I assume it's related to the error I received when creating a new server :

vzctl create 1002 --ostemplate debian-3.1-i386-minimal
Creating VPS private area: /vz/private/1002
Unable to get full ostemplate name for debian-3.1-i386-minimal
Performing postcreate actions
VPS private area was created

Quote:Unable to get full ostemplate name for debian-3.1-i386-minimal
It is just a warning, you can safely ignore that, given you specified full template name (which you did).

vzpkgls list only those templates for which metadata exists. And there is no template metadata for debian...

Ahhh.... that's annoying. I was hoping to use the output to use in a menu system. I'll just do an ls of /vz/template/cache I guess.

Thanks for the reply
