When I make a modprobe vzcpt or modprobe vzmon or vzdev, I get this error:
WARNING: Error inserting vzdev
(/lib/modules/2.6.18-53.1.19.el5.028stab053.14PAE/kernel/kernel/ve/vzdev.ko): Unknown symbol in module, or unknown parameter (see dmesg)
WARNING: Error inserting vzmon
(/lib/modules/2.6.18-53.1.19.el5.028stab053.14PAE/kernel/kernel/ve/vzmon.ko): Unknown symbol in module, or unknown parameter (see dmesg)
FATAL: Error inserting vzcpt
(/lib/modules/2.6.18-53.1.19.el5.028stab053.14PAE/kernel/kernel/cpt/vzcpt.ko): Unknown symbol in module, or unknown parameter (see dmesg)

dmesg has this entry:
ip_conntrack: Unknown parameter `ip_conntrack_ftp'

Kernel: 2.6.18-53.1.19.el5.028stab053.14PAE

OS: centos-release-5-4.el5.centos.1

On my system everything works just fine

```
# uname -a
Linux myhost 2.6.18-53.1.19.el5.028stab053.14PAE #1 SMP Thu May 8 21:09:32 MSD 2008 i686
i686 i386 GNU/Linux
# lsmod | grep vzmon
# modprobe vzmon
# lsmod | grep vzmon
vzmon                  46984  0
vzdev                   7556  1 vzmon
ipv6                  262048  21 vzmon
# lsmod | grep conntrack
```

Moreover, vzmon doesn't depend on ip_conntrack (look at the provided output) so I'm not sure how "ip_conntrack: Unknown parameter `ip_conntrack_ftp'" relates to the problem described. Please, examine dmesg another time and try to find the appropriate message.
