I don't know what it is bout 3.0.24 is seriously broken. I'm scrambling to reinstall 3.0.23 which seems to fix it. At least I'm running again. Although restarting VZ doesn't restart the VEs. I'm having to start them manually.

I found that you'd already filed the bug. Thank you very much.
Just in case, if somebody needs it http://bugzilla.openvz.org/show_bug.cgi?id=1564

Download the 3.0.23 RPMs and then run rpm -ivh --force vzctl*

I haven't seen anything. I'm wondering what I'm doing that's different than those who don't have the problem.

Just upgraded to 3.0.24.1 and it seems that the problem I was having is fixed.
