Subject: CentOS 4.2 as host ?

Greetings all,

I'm pretty new at this but was wondering if it is possible to install OpenVZ on a CentOS 4.2 host machine ?

If so, umm, how do you do it ? I assume none of the supplied kernel RPM's here are suitable and you'd need to recompile ?

Any help appreciated.

Yes, you can install OpenVZ on a CentOS 4.2 machine.

No, you don't need to recompile anything, just use supplied RPMS as described in Quick Installation

Forgive me for having a chemically treated hair moment (I no longer have blonde moments as they aren't politically correct) and missing that on the quick install page.

Ta.
