Hi,

I was starng a Vps hosting company and couldnt find a user based panel anywhere, so i coded my own using the ZPanel Backend.

This panel works very well so far, If your interested in it visit

http://www.thezpanel.com/forums/viewtopic.php?f=10&t=277 2&p=18438#p18438

We have coded more, we jare going to update the screenshots!

Please give me some feedback on The Zpanel forums and / or on OpenVZ forums.

Would anybody like to use this panel free?

I dont think i made the first post very clear as i have had people come up to me needed a lil help.

This is not a standard copy of zpanel you will be downloading. This version coded By Hdm Online and Shell Vps controls the vps's.

The panel can:
Start / Stop Vps
change root pass
Manage Ip's
Create / Destroy Vps
Manage vps.

This panel is for your customers to be able to control there vps and for you to be able to control all vps's / create / destroy vps. Im not linking you to ZPanel hosting interface

Think of this as more of virtuozzos control panel where your controlling the vps NOT Plesk where where your controlling the hosting for that vps.

Hi ,
Looks like a great panel and exactlY what im looking for
Id like to give its a test if possible but the link on the forum
doesnt work anymore , can it be downloaded from somewhere ?

Thanks .

Is this great projekt still active? Where can I download it?
The download link doesn't work

Hi,

I no longer own the domain, was left to expire as the company became bigger and registered as a limited company. We still use OpenVZ but do not use the ZPanel module originally created. We have implemented said code within our own site. I will look for 'ZVDS.ZIP' on my Download servers (I'm not one to delte anything I or the company makes) if not i shall try my best to pull the ZVDS control panel we have implemented into our own site, remove the garbage and i will post it as a seperate control panel.

Kind regards,
Harrison Spink
