Hi,

I have managed to migrate FC2 Virtuozzo VPS to OpenVZ node by rsync'ing root area to private area to avoid incompatibility of OpenVZ and Virtuozzo templates:

on Virtuozzo:

vzctl create 98700 --pkgset fedora-core-2
Creating VPS private area (fedora-core-2/20060323)
VPS is mounted
Postcreate action done
VPS is unmounted
VPS private area was created
Delete port redirection
Adding port redirection to VPS(1): 4643 8443

vzctl start 98700
Starting VPS ...
VPS is mounted
Setup slm memory limit
Adding port redirection to VPS(1): 4643 8443
VPS start in progress...

vzctl stop 98700
Stopping VPS ...
VPS was stopped
VPS is unmounted

vzctl mount 98700
VPS is mounted

rsync -a -e ssh /vz/root/98700 root@OpenVZ_node_IP:/vz/private/

rsync -a -e ssh /etc/sysconfig/vz-scripts/98700.conf
root@OpenVZ_node_IP:/etc/sysconfig/vz-scripts/

on OpenVZ:

vzctl start 98700
Starting VPS ...
Initializing quota ...
VPS is mounted
Setting CPU units: 1000
VPS start in progress...

vzctl enter 98700
entered into VPS 98700
-bash-2.05b# cat /etc/redhat-release
Fedora Core release 2 (Tettnang)
-bash-2.05b#

I have tried this trick to migrate some VEs from Virtuozzo to OpenVZ with Fedora and Plesk and it works perfectly.

Still no way to use vzmigrate to migrate containers from Virtuozzo to OpenVZ ?

I did try, but got the following error:

Quote:
vzmigrate --remove-area no --nostart root@x.183.208.94 421
root@x.183.208.94's password:
bash: /usr/sbin/vzmdest: No such file or directory
seems you need install migrate package on destination node
Can't init migrate : seems you need install migrate package on destination node
