This is the system spec:

Linux lime 2.6.9-34.ELsmp #1 SMP Wed Mar 8 00:27:03 CST 2006 i686 i686 i386 GNU/Linux

Dell poweredge 1750 1u rackmount server

Which has the following hardware:
Dual 3.2GHz Intel Xeon Processors
4Gb Ram
2 x 36GB SCSI Hard Disks in Hot-Swap Carriers
1 x 146GB SCSI Hard Disk in Hot-Swap Carriers
Dual Integrated Gigabit Ethernet Ports
2 x Hot-Swappable Power Supplies
DRAC111 Remote Management Card
DVD-ROM

I've done: rpm -ihv ovzkernel-smp-2.6.8-022stab078.10.i686.rpm

And I get the following warning... WARNING: No module megaraid_mbox found for kernel 2.6.8-022stab078.10-smp, continuing anyway

Since I couldn't find any details of this on the site, I thought i'd enquire as to in what way this could cause a problem, and if it could possibly be resolved.

Thanks.

This module is complied inside OVZ kernel (which is the cause of warning, since no standalone module is available).
No problems should happen.
