Welcome
Is it possible to compile the kernel with the driver ath9k_htc OpenVZ?
Some little how-to?
Or how someone would be kind enough and threw me to the package. deb for. i386

Heya,

http :// wiki.openvz.org/Kernel_build should answer most questions.
I suggest making a CentOS VE and do the RPM-build and then insert ur driver as a patch.

that way you also get a newer/more supported kernel
