Subject: Re: Problems with vzyum, vzpkg and templates in a x86_64 machine
Posted by logart on Mon, 12 Mar 2007 00:49:52 GMT

I am having issues with vzyum on my x86_64 Dell SC430 server as well.

Getting this:

exec /usr/share/vzyum/bin/yum -c /vz/template/fedora-core/5/i386/config/yum.conf --installroot /vz/root/101 --vps=101 update
There was a problem importing one of the Python modules
required to run yum. The error leading to this problem was:

 /usr/share/vzpkgtools/vzrpm44/lib/python2.3/site-packages/rp m/_rpmmodule.so: cannot open shared object file: No such file or directory

It seems this is a known issue and there is no solution for it?

Running 'yum' from the VE is difficult because the 'update' process consumes a lot of disk/memory. I am getting diskspace and memory errors when try the yum update from the VE.
