Vasily Tarasov wrote on Sun, 11 March 2007 07:384) Try to set all UBC limits to unlimited value. Even if you don't have failcounters it may be pertinent.

I generated a reasonable default using `vzsplit -n 1`, then I set memory to 2GB:

```
VMGUARPAGES="524288:2147483647"
```

```
OOMGUARPAGES="524288:2147483647"
```

```
PRIVVMPAGES="524288:2147483647"
```

or whats the best way to set no(unlimited) UBC limits?
