Subject: Re: Install failed, grub doesn't even boot
Posted by JimL on Mon, 12 Mar 2007 13:07:31 GMT

OK so we reinstalled CentOS from scratch and now it boots. I have no idea what happened.

We now get keymap errors when logging in as normal users on the console. From Google I see that this might be a kernel issue. Does anyone know what might be causing a "keymap 0 permission denied" error (and maps 2,3 4, etc.).

Thanks,
Jim.
