```
ls -l /var/vzquota
```

```
total 12
```

```
-rw----- 1 root root 132 Mar 14 17:22 q.1
```

```
-rw----- 1 root root 132 Mar 14 17:39 quota.1000
```

```
-rw----- 1 root root 131 Mar 12 15:08 quota.900
```

```
[root@mainhost001 vzquota]# vzctl --verbose start 1000
```

```
Starting VE ...
```

```
vzquota : (error) Quota on syscall for 1000: File exists
```

```
vzquota on failed [3]
```

I copied /vz/* using rsync to /home/master/vz because /home has a lions share of the disk space. I was running low on /. VEID 1000 ran out of disk space. I moved /vz /oldvz and linked /home/master/vz to /vz. I changed /etc/vz/conf/1000.conf to give it more disk space.

I tried to start 1000, got the above message, removed the /var/vzquota/quota.1000 (actually moved it to q.1) and reran the vzctl start.

I did a search on the error, but nothing turned up. This is a Centos on Centos install.

```
vzquota show 1000
```

| resource | usage | softlimit | hardlimit | grace |
|-----------|---------|-----------|-----------|-------|
| 1k-blocks | 2468160 | 6004899 | 6225380 | |
| inodes | 21175 | 80100 | 88100 | |

Thanks,
Jim.
