I see, that the support of your device (some VIA SATA Controller) appeared only in 2.6.20 vanilla kernel. So 2.6.18 OpenVZ kernel doesn't support it. Note that your device is not supported even by RHEL5, that was released a day ago...
Soon we're a going to release 2.6.20 based OpenVZ kernel. It should solve your problem.
One more way: you can compile driver for your kernel manually.
