I have just customised the config for one of our VPSs and just after creating it and trying to set the password, I get an error:

```
[root@186 ~]# vzctl set 301 --userpasswd root:password
Starting VE ...
VE is mounted
env_create error: Resource temporarily unavailable
VE start in progress...
VE is not running
Password change failed
Unable to stop: VE is not running
```

Config being used is:

```

What is causing this resource unavailable error?
