I used both the available rpms at openvz kernel repo.

For the source compilation, I used the kernel config ,

[http://download.openvz.org/kernel/devel/028test018.1/configs /kernel-2.6.18-i686-smp.config.ovz](http://download.openvz.org/kernel/devel/028test018.1/configs/kernel-2.6.18-i686-smp.config.ovz)

and the patch at [http://download.openvz.org/kernel/devel/028test018.1/patches /](http://download.openvz.org/kernel/devel/028test018.1/patches/)
