Hi,

I want to have a connection between our vpn box and one VE.
I successfully established a connections between the HN and the vpn box.
The VE cannot ping inside though (while the HN can).

Since I only need one port, I could use an ssh tunnel like that:

```
ssh -l root <HN_IP> -L 10389:<10.0.0.1>:389 -N
```

Is there a way to do that proper?

Thanks,
Kai
