Create VPS:

If no errors, Linux OS was just created

Set VPSID 151 onboot = yes

Added 192.168.1.222 to VPSID 151

Added hostname localhost.com to VPSID 151

Set root password as demo for VPSID 151

I just started VPSID 151, you should now be able to shell into 192.168.1.222 using user root and password demo

but vps not create  
i check vzlist --all  
not show

=====

note php.ini change << great tips >>  
please help me to run the Great control panel >>>  
god bless you !!!!!!!
