Thanks.

It is highly unlikely that I ran out of host disk space:

df -h
/dev/mapper/VolGroup01-sata
            357G   71G   269G 21% /bigdata
[root@50dom0 log]# ls -l /vz
lrwxrwxrwx 1 root root 12 Feb 4 07:16 /vz -> /bigdata/vz/

But I didn't look before I removed the core files so it's possible.

After installing the latest kernel and rebooting, it seems to have cleared itself. Rebooting alone
did not, however.

Thanks,
Jim.
