Subject: How many bytes in a page on a 64bit machine? Posted by jarcher on Mon, 26 Mar 2007 11:18:38 GMT View Forum Message <> Reply to Message

Hi All...

I saw in the wiki that it said a memory page on a 32bit machine is 4,096 bytes. Is it different on a 64bit machine? If so, how many bytes to a page on a machine with a 64bit OS?

Thanks...
