Subject: Re: 2.6.18-ovz028stab023.1-smp kernel stopped
Posted by JimL on Wed, 28 Mar 2007 09:18:37 GMT

Keyboard was flat dead this morning, however I seemed to have gotten a kernel panic:

BUG: NMI Watchdog detected LOCKUP on CPU1, eip c04b4be8, registers:

I'll see if I can figure out how to file a bug report.

OK filed as bug #516. Two attachments. Both are probably close to identical. One is serial console, the other is netconsole. I also have a photo of the monitor, but it's really a dup of the last 25 lines of the two files.
