I've also observed this issue, under FC5 on intel x86_64 smp (duo-
core xeon dual processor) hardware, about 4 months ago (sorry, I
can't provide the versions I was testing then, 2.6.16_testing kernel
and some version of vzctl). I only observed the binary 'fluff' at
the very end of the .conf file on that one occasion, I simply vi'd
the file and corrected it.
