Bad news i been install all apache 1.3 and the same problem
vps
Create VPS:

If no errors, Linux OS was just created

Set VPSID 1212 onboot = yes

Added 192.168.1.129 to VPSID 1212

Added hostname 1111.com to VPSID 1212

Set root password as admin ID 1212

I just started VPSID 1212, you should now be able to shell into 192.168.1.129 using user root and
password admin
but not create any vps
i run apache 1.3

Help!!
