After thinking about it more, I think one of the issues here is the way the output of df is being parsed. When I run df, the output contains a newline. The regex used to parse splits on spaces. Here is the output from df on my system:

```
actual:/var/local/vps-bu# df /mnt/compvps/vz/private/108/
Filesystem      1K-blocks    Used Available Use% Mounted on
/dev/mapper/actual--vg001-vps--storage
                100756920  6411820  89226944   7% /mnt/compvps
```

The output of lvscan may also be helpful:

```
actual:/var/local/vps-bu# lvscan
ACTIVE          '/dev/actual-vg001/vps-storage' [97.62 GB] inherit
ACTIVE          '/dev/VG-RAID/LV1' [144.35 GB] inherit
```
