Hello,

There is no precreated template cache for FC6 at the moment at  
openvz.org. Probably somebody from OpenVZ users has created it, but I  
haven't heard about it.

I guess, you can install FC5 precreated template cache, create a VE  
based on this template, then upgrade VE up to FC6 from inside VE using  
usual means (up2date, yum). After that clean VE from needless  
information (network settings, users, ...) and create a tar.gz archive  
of VE - it'll be a template cache for FC6.

HTH,  
Vasily
