I have used every different kind of kernel with similar results, I have used customized versions of 2.6.9 and 2.6.18 along with the binary versions with similar results. They all perform with a difference of 200 compared to the non-openvz kernels.

On a custom 2.6.18 (non-ovz) I received over 600, but with any openVZ 2.6.18 I cannot get over 420.
