---

Hi all,

I'm very new to OpenVZ. I don't have it installed yet but i do have a question.

I would like to know if the following is possible:

Install 2 network cards, 1 connected to a LAN (10.0.10.0), the other one connected to a DMZ (10.0.20.0).

Would i be able to create VPS's that talk only to LAN and at the same time have other VPS's that talk only to the DMZ?

Real world situation, have web and email servers (DMZ) as well as file and database servers (LAN) inside their own VPS.

Thanks in advance,

Eric
