which means that bridge dropped the packets at all.

this should not happen normally...

how to handle it?

1. try

```
# brctl setfd <bridge> 0
```

2. try to disable STP:

```
# brctl stp <bridge> off
```

3. yes, you can try to install printk() in appropriate function in kernel. it is quite easy

check http://wiki.openvz.org/Kernel_build for details.
