Yes, I know.

But I'll have to put OpenVZ in a RHEL 4 production server with RH support, and I'm afraid to lose the support if I change the kernel version to an unofficial.

In this server I'm planning to install the supported kernel which is 2.6.9.x, what is older than 2.6.15, but what could I do?

I'm trying to use 2.6.15 kernel in a test Ubuntu machine, just to test OpenVZ before installing in the production server.

Thanks a lot
