I have smbfs enabled in the kernel of the HW. smbfs module is modprobed and smbfs visible in /proc/filesystems. I can't however mount a smb share inside a VE and no smbfs visible in /proc/filesystems of VE. There's no feature (set --feature smbfs:on) called smbfs. Didnt find much on google either.

Anyone battled with this?

Thanks in advance
