Hello Markus,

If you wish to have a second IP address for a VE you should give
HN@root# vzctl set <veid> --ipadd <second_ip> --save
command. It will create second venet interface with specified IP address
in VE.

But if you wish to set a nameserver for VE, then use
HN@root# vzctl set <veid> --nameserve <nameserver_ip> --save
command. It will modify /etc/resolv.conf file in VE and produce other
distribution-specific actions in order your VE to be able to resolve
domain names.

HTH,
Vasily.
