Seems that there is a firewall on 208.67.222.222 or on some node between your HN and DNS. Can you check that?

For example you can stop all VEs, change IP address of your HN (147.86.124.80) to 147.86.124.81 temporary (VE's current IP) and try to do nslookup google.com 208.67.222.222 on HN again.

Thanks/
