There are 2 internal DNS which I tried in HN and VE: same effect. There is no Firewall between those DNS and this machine.

nslookup google.com 208.67.222.222 from HN when HN is .124.81 works perfect.

The two internal DNS I tried are 147.86.80.20 and 147.86.80.21.
