I finally find out the real problem.

The vz init script was already the last one and it wasn't working.

Just to test I put a "sleep 20" before script execution and It worked !

Debuging I put "ps -ef >>/root/ps.txt" before and after "sleep 20" and I realized that the difference was that nic wasn't up at vz script execution time, and this was the problem.

I saw the following before the line with "sleep" :

```
root    2723    1  0 11:56 ?        00:00:00 /sbin/ifup --allow auto eth0
```

That's why I had that weird behaviour with arp output.

Isn't this a bug, right? Or should vz script check if ethx is up before running?

Thanks a lot
