Subject: Re: Oopses in Glibc... Posted by m.s.tremer on Wed, 25 Apr 2007 16:11:51 GMT View Forum Message <> Reply to Message

1) There is really nothing in the logs... Neither /var/log/messages nor any other (dmesg...). GCC simply dies with SegFault.

2) The environment is a bunch of makefiles that run "./configure ... && make && make install"

3) The same build process runs on any other kernel I know...
(Fedora Core 5/6, SuSE 9.3/10.0/10.2, Debian 3.1)
Now, it is running on the real Centos kernel... I'm still waiting... No errors yet...

Hardware was completely tested by memtest & cpuburn.

Michael
