Hi, all.

How stable is OpenVZ considered on 64-bit platforms, specifically Intel Xeons? I did some searches on the site, but couldn't find anything solid on the subject, only mention of "fixes"

I ask because the tech who's setting up our hardware "had a problem with installing OpenVZ" If OpenVZ on 64-bit is known to be solid, then I'll prod him for some more specific errors and see whether we can get this to happen.
