Hi,

today after building my openvz development environment i just wanted to build the userspace tools like vzquota and vzctl. I tried to build vzquota with the default Makefile and CFLAGS which includes '-Werror' GCC4 complains about the following:

```
cc1: warnings being treated as errors
quotaon.c: In function 'quotaugidset_proc':
quotaon.c:1228: warning: pointer targets in passing argument 2 of 'str2uint' differ in signedness
make[1]: *** [quotaon.o] Error 1
```

Attached is a small fix which only changes the 'int ugid' (which is default signed) to 'unsigned int ugid' Nothing more. :)

--Maik

```
