And YES!
I made the same bug as in 10.2 again, leaving udevd running, and not adding the /dev/pts mount by hand. This of course wont work in a VE, for example you cant use ssh from inside...
Sorry guys, I think im kinda hot-headed these times, not making enough field tests before releasing.
I shall update the Slackware-HowTo Wiki and add these too.

Kir, can I ask for a re-mirror? Please
