(ignore previous answer, it was for another letter...)

Hello,

can you do the following actions, please:

```
# vzctl stop <veid>
Stopping VE ...
VE was stopped
VE is unmounted
# vzquota drop <veid>
# vzctl start <veid>
Starting VE ...
Initializing quota ...
VE is mounted
Setting CPU units: 1000
VE start in progress...
```

After that try to install/extract files in VE as you did in previous attempts. If these actions still fail, please post here the output of the following commands:

```
# vzquota stat <veid>
# vzctl exec <veid> df
# cat /etc/vz/conf/<veid>.conf
# cat /etc/vz/vz.conf
# uname -a
```

Thank you,
Vasily
