## Subject: Re: CTRL-C not working inside VPS
Posted by globi on Wed, 09 May 2007 07:02:45 GMT

Well, my node is Debian Etch with kernel 2.6.20.

The OS Templates that seem not to understand CTRL-C are actually all of them. I mainly work with Ubuntu and Debian VEs (official ones from openvz.org).

Terminal Emulation: no clue... don't know how to find that out. But I have attached my current kernel config - maybe that helps.
