Sorry if this mail don't concerns to OVZ, but I need to discard possibilities

```
-bash-3.00# uname -a
Linux exodo.colombiahosting.com.co 2.6.8-022stab078.14-smp #1 SMP Wed
Jul 19 16:          13:15 MSD 2006 i686 i686 i386 GNU/Linux
```

Im using Exim 4.60, that comes with DirectAdmin. I have smtp_accept_max in 130 and sometimes Im getting this error: "421 Too many concurrent SMTP connections; please try again later."

I used exiwhat and netstat and I determine that yahoo servers have many incoming connections to my server. Trying to determine the problem I used an sniffer, its an example:

SNIFFER OUTOUT

```
250 OK
250 Accepted
354 Enter message, ending with "." on a line by itself
250 OK id=1HlpNN-0000Rm-7w
QUIT
221 exodo.colombiahosting.com.co closing connection
14  FIN-WAIT-1    209.191.125.35:29978 > 66.128.49.69:smtp
14  TIME-WAIT    209.191.125.35:29978 > 66.128.49.69:smtp
14  RESET       209.191.125.35:29978 > 66.128.49.69:smtp
```

```
-bash-3.00# netstat -an | grep 209.191.125.35
tcp    0    0 66.128.49.69:25
209.191.125.35:27139    ESTABLISHED
tcp    0    0 66.128.49.69:25
209.191.125.35:39853    ESTABLISHED
```

```
-bash-3.00# exiwhat | grep 209.191.125.35
7549 handling incoming connection from web38404.mail.mud.yahoo.com
[209.191.125.35] id=1Hlow6-0001xl-It
23792 handling incoming connection from web38404.mail.mud.yahoo.com
[209.191.125.35] id=1HloZ6-0006Bk-UK
```

and 20 minutes later I do netstat again and I get the same info. Then the connections never close

```
-bash-3.00# netstat -an | grep 209.191.125.35
```

```
tcp      0      0 66.128.49.69:25
209.191.125.35:27139 ESTABLISHED
tcp      0      0 66.128.49.69:25
209.191.125.35:39853 ESTABLISHED
```

I upgraded to exim 4.66 and I get the same problem.

I'll really thanks if you can help me!
