
Subject: *BUG REPORTED* Cannot configure VRRPD inside a VE

Hi All:

I have recently been testing VRRPD () on a RHEL4 update 4 VE and ran into the following error when trying to configure...

Error:

```
<snippet>  
cant open raw socket. errno=97. (try to run it as root)  
</snippet>
```

Here is the command that I ran:

```
<snippet>  
vrrpd -i eth0 -p 25 -v 1 172.17.8.181  
</snippet>
```

So at a first guess, it would appear that the VE doesn't have promiscuous access to the Ethernet device.

Any help would be much appreciated.
