Subject: *BUG REPORTED* Cannot configure VRRPD inside a VE Posted by oviney on Fri, 11 May 2007 17:42:11 GMT

View Forum Message <> Reply to Message

Hi All:

I have recently been testing VRRPD () on a RHEL4 update 4 VE and ran into the following error when trying to configure...

Error:

<snippet>
cant open raw socket. errno=97. (try to run it as root)
</snippet>

Here is the command that I ran:

<snippet>
vrrpd -i eth0 -p 25 -v 1 172.17.8.181
</snippet>

So at a first guess, it would appear that the VE doesn't have promiscuous access to the Ethernet device.

Any help would be much appreciated.
