Regarding the versions I am using:

Kernel 2.6.18-8.el5.028stab031.1 and vzctl 3.0.16 on CentOS 5 on the HN and a CentOS 4 template on the VPS.

Regarding the firewall rule that behaves unexpectedly in the VE:

Sorry, I have just realized that I had an error in the capitalization of the firewall rule. The correct line is:

```
iptables -A RH-Firewall-1-INPUT -m state --state NEW -m tcp -p tcp --dport 22 -j ACCEPT
```

that is: "state" is not in capitals. (When using "STATE" in the command line above I get the same error message as you.)
