Hello,

1. You're mounting to private directory, that is not right: in order to see information on external mounted filesystem in VE, you should start VE and then mount to root directory:

```
mount --bind /mnt/testhome /vz/root/102/home/
```

2. vzquota doesn't support NFS [http://bugzilla.openvz.org/show\\_bug.cgi?id=219](http://bugzilla.openvz.org/show_bug.cgi?id=219)

3. vzqouta only covers one filesystem, but not mounted over it.

So, it is hardly possible to use vzquota in the manner you wish.
